OBJECTIVE

Final-year Computer Science student focused on data science and machine learning. I like taking a project from a messy dataset to a working model to something a non-technical person can actually use. Looking for a data science or analyst role where I can keep doing that.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript

Web Development: HTML, CSS, JavaScript, React.js, MERN Stack

Python Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, PyTorch

Python Frameworks: Django, Flask

Machine Learning / AI: Machine Learning, Neural Networks, Deep Learning, NLP, Large Language Models

Data & Databases: MySQL, Excel, Power BI

Tools: Git, GitHub, Jupyter Notebook, VS Code

PROJECTS

Customer Churn Prediction & Sentiment Analysis App | *Python, Scikit-learn, NLP, Flask, PyTorch*

- Trained and compared Logistic Regression, Random Forest, and a Neural Network to predict which customers were likely to churn, tuning features and hyperparameters along the way.
- Added a sentiment analysis layer on customer reviews using tokenization, TF-IDF, and a fine-tuned transformer model.
- Wrapped the final model in a Flask app so predictions run in real time from user input, not just in a notebook.

AI Resume Analyzer & Summarizer | *React (Vite), Node.js, Express, Gemini API, JavaScript*

- Built a tool that takes an uploaded resume and returns structured feedback and a summary, using the Gemini API to do the actual analysis.
- Handled the frontend in React with Vite, and wrote the Node.js and Express backend for file parsing and formatting the API's response.
- Ran into a string of platform-specific deployment bugs getting this onto both Vercel and GitHub Pages. Fixed them one by one and got both live.

GraphOne Intelligence Pipeline | *Python, Web Scraping, LLM Extraction, Entity Resolution, Google Sheets API*

- Built a pipeline that scrapes raw web data, pulls structured information out of it using an LLM, and matches records that refer to the same real entity across different sources.
- Wrote the entity resolution logic myself to catch duplicates and mismatches between sources.
- Connected the output to the Google Sheets API so the final data lands directly in a sheet, ready to use.

Interactive Personal Portfolio Website | *HTML5, CSS3, JavaScript*

- Built a responsive portfolio site from scratch with semantic HTML5 and CSS3, using Flexbox and Grid for layout.
- Added smooth scrolling, project filtering, and contact form validation with plain JavaScript, no frameworks.
- Tested it across browsers and screen sizes to make sure it actually holds up on mobile.

EDUCATION

B.Tech in Computer Science, Maharshi Dayanand University

Expected Graduation: 2027

CERTIFICATIONS

- Oracle Agentic AI Foundation Associate (Aug 2026)

- TCS iON Young Professional (Jul 2026)
- TCS iON AI Foundation (Jul 2026)
- IBM AI Fundamentals (Jun 2026)
- IBM Project Management Fundamentals (Jun 2026)
- Cisco Networking Academy Python Essentials 1 (Jul 2026)
- Kaggle Python (Jul 2026)
- HackerRank SQL Advanced (Jun 2026)
- University of Helsinki Elements of AI (Jul 2026)
- Saylor University Python for Data Science (Jun 2026)
- Deloitte Job Simulation (Jul 2026)
- 1 Month Project-Based Virtual Internship, Thirenex Edutech LLP
